

# Quick.Cms the instruction of the installation and the service

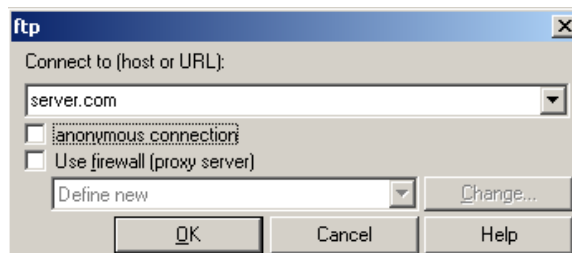

1. The installation
2. The configuration
3. The everyday service
4. The description of files and catalogues
5. Several notes and advices

## Installation

The programme Total Commander can be a very helpful tool in the process of installation, which can pack and unpack files. It also has the client ftp which will be helpful, if we want to place the web page on the server (if you do not have the programme Total Commander, you can receive it from <http://www.ghisler.com/download.htm> )

First thing, what we ought to do, is to unpack the file with Quick.Cms to the catalogue, wherein should be found. One ought to start the programme Total Commander and in one window to open the catalogue, wherein is found packed file with our side, and in the second one - catalogue, ad quem )we want to unpack it. Then we enter the packed file by the key “enter”, we mark all found files (e.g.: by the key “insert”) and by the key “F5” we unpack it to the catalogue chosen in the second window.

If we want to place the web page on the server, we must copy unpacked files on our account. Accordingly we press keys “ctrl + N” and we introduce data to the connection (first the host name - here it is necessary to remember to unmark the significantly noted option „the connection anonymous”, then the log name and the password.

Then, we enter the catalogue “public\_html” on our account and we copy there (or to the catalogue formed in it) unpacked files from our disk.

Next thing, one should do to grant full rights for each catalogues and files. Here their list:

Catalogue and all files:	CHMOD
'config/'	777
'files/'	777
'db/'	777

Here, also becomes helpful Total Commander, because it will suffice to mark the file or catalogues with which we want to grant rights and from the menu of the programme choose: Files -> Change attributes, then mark all fields or to write 777 in textual field below.

That's everything about the installation and the startup of the web page on the server. Now we are able to see how the web page looks and works.

## Configuration

One can introduce data to our side, to enter the administration one ought to add "admin" to the address of the web page, (eg.: if the address of the web page, is: <http://adres.pl/>, then the administration is found under the address: <http://adres.pl/admin/> )

At the screen of logging appear - login and the password will be placed as follows:

Login: **admin**

The password: **admin**

Login administration	version: 0.3
Login: <input type="text" value="admin"/>	
Pass: <input type="password"/>	
<input type="button" value="« back"/>	<input type="button" value="sign in »"/>
homepage   administration	

One can make change after login in the panel the configuration.

pages configuration log out

At the beginning the most important is the configurational panel.

It contains such fields as:

**Title** - the content of this field will be shown in the belt of the reviewer, one ought to rethink its content, because it is important for search engines internet-. This content appears in search engine as the title of our web page.

**Description** - this field serves mostly search engines. His content will be shown as the description of our web page in search engines, the public meeting the content of this field also one ought well to think over.

**Search words** - key words connected with our web page - field with our web page the field, whence profit wyszukiwarki.

**The default language** - the choice of the default language.

**The starting web page** - the web page/ subpage as main starting one (first web page must be defined)

**Login** - login of the administrator of the page {the side}.

**The password** - the password of the administrator of the page {the side}.

**News on the web page** \*- the quantity news that has to be shown on web page .

**The size of picture** - the size of the minimal picture, which will be created during the logging process.

\* - options which appear only in the full version and not in the version Lite

## Everyday service

After the installation Quick.Cms and the arrangement of the basic information in the configuration, we can start input the content of web pages.

After the entry on “pages” and choosing the option “add the page” in the menu of the administrator - you will get to an adding form of the new web page / subpage. Each fields mean:

**The name** - the name of the web page/ subpage.

**The superior web page** - choose the superior web page at present added. If the actual added web page has not to be subpage choose “the Lack”.

**The type** - if added web page is not subpage, choose the type / the kind of the projection. The type means the place where names of web pages is projected.. There is defaulting division on “the top menu” and “the left menu” .

**The short description** - written data will be appearing in the full description, if it will be empty.

The short description appears in the list of subpages of the superior web page.

**The full description** - one shows in details of the web page

**The date** - if a news is added to the web page, the date of the adding web page will be showing in the client version

**The position** - the way in which web pages are showed/sorted

**Visible** - the information about showing or not the web page/ subpage side

**The subpages projection** - choose the way of the subpages projection at actual added web page:

- The list (the name, the description) - subpages will be shown as the list with a name and a short description.
- The list (the name, the description, the photo)- subpages on this the web page will be shown as the list with a name, a short description and a photo.
- News \* (the name, the description, the photo)- subpages on this the web page will be shown as the list with a name, a short description , a photo and a date.  
The limit of shown subpages given is in the configuration (News on the web page ).
- The gallery \* (the name, the photo)- subpages on this the web page will be shown in 3-4 lines with a photo and a name.

**Photos** - choose the way of the projection added photoes to the web page:

- Default - photos will be shown as the list - one under one.
- The gallery \*- photos will be shown as the gallery in 3-4 lines.

**Files with descriptions** - choose photos and files, allot them descriptions, and you can alsif you add the photo you can size the greater side mini photos which one generates after the lading.

\* - options which appear only in the full version and not in the version Lite

**Name**

Parent page

Type

Short description

Full description 

**B** *I* U

[Enlarge Size](#) | [Reduce Size](#)

Date

Position  | Visible  | Subpages type  | Photos

Files

Add file		
File	Description	Image size [px]
<input type="text"/> <input type="button" value="Wybierz..."/>	<input type="text"/>	<input type="text" value="80"/>
<input type="text"/> <input type="button" value="Wybierz..."/>	<input type="text"/>	<input type="text" value="80"/>
<input type="text"/> <input type="button" value="Wybierz..."/>	<input type="text"/>	<input type="text" value="80"/>

After the correct fulfillment of form press the button “save >>”. Wait till data will be entered on the server. Then you will be automatically transferred to the list of web pages / subpages.

The subpage list looks similarly to the photo placed below.

Pages list			
ID	Name	Position	
2 - menu lewe			
1	about us	0	
2	our offer	1	
3	solutions	2	
7	offer 1	0	
8	offer 2	1	
4	help	3	
6	conditions	4	
9	rule 1	0	
10	rule 2	1	
1 - menu góra			
11	news	0	
12	news 1	0	
13	news 2	0	
14	news 3	0	
15	news 4	0	
16	news 5	0	
17	news 6	0	
18	news title 7	0	
5	contact	1	

The list is divided on web page's types and shows Id number, the name and also web page's position.

If you want to enter the edition of the web page/ subpage, click on the blue pencil which you can find on the right side of the letter.

If you want to delete the web page/ subpage, press the button with the red line on the right side of the list of web pages (if you delete the web page, you delete all files, descriptions on that web page and its subpage)

## Description of files and catalogues

**config** - the catalogue with the configuration file `general.php`,  
**db** - the catalogue with the `.php` files, which is also databases,  
**files** - the catalogue has files and photos added to web pages  
**lang** - the catalogue has files with lingual versions of the web page,  
**templates** - the catalogue has files with graphic patterns of the web page

### Most important files of graphic patterns (the location: templates) :

**default.css** - the file contains cascade styles of web pages, if you change values of each values you can also change the look of the web page,  
**page.tpl** - the file contains the head of the web page with the logo (HEAD) and its foot (FOOT),  
**menu\_1.tpl** - the web page's menu (the default upper menu/horizontal),  
**menu\_2.tpl** - the web page's menu (the default left menu/vertical),  
**pages\_show.tpl** - shows details of the web page and photos, files and subpages,  
**pages\_show\_photos\_1.tpl** - shows the list of photos as: default,  
**pages\_show\_photos\_2.tpl \*** - shows the list of photos as: The gallery,  
**pages\_list\_1.tpl** - shows the list of subpages as: The list (the name, the description),  
**pages\_list\_2.tpl** - shows the list of subpage as: The list (the name, the description, the photo),  
**pages\_list\_3.tpl \*** - shows the list of subpage as: News (the name, the description, the photo),  
**pages\_list\_4.tpl \*** - shows the list of subpage as: The gallery (the name, the photo).

## Some notes and advices

1. Quick.Cms makes possible to add the web page to 3 levels, so you can add the web page , later the subpage and then the subpage of subpage.
2. Check, if the version PHP is higher than 4.3.3. This is required for the correct activity of the application.
3. Try not to add too may photos (the maximum is the size 1600 x 1200 pixels), because the server can have the problem with making mini photos.
4. The Adding photo or the file should not cross 2 MB (default limitations of servers).
5. If you want to Quick.Cms make mini photos check, whether the library gd2.0 in PHP is active on the server.
6. The most of problems are rights. It is recommended to check, whether rights are correctly defined. (it was given at the beginning of the instruction) to catalogues and files if:
  - if you have problems with photos and files loading
  - if you have problems with web pages / subpages data saving .

7. Do not delete inscription “powered that Quick.Cms” from your web page.

\* - files which appears only in the full version, not in the version Lite

## Additional information

You can make any modifications, except from removing of the registration “powered by Quick.Cms” which has to remain as a link to the side <http://opensolution.org/>
